

MySQL

module 1 SQL commands

→ Database operations

create database : create database name;

See all databases : Show databases ;

delete database : drop database db-name;

→ Table operations

create table : CREATE TABLE table-name(
col1 datatype,
col2 datatype,
:);

foreign key : FOREIGN KEY(new-table-column)
REFERENCES old-table(old-table-column);

Show all : show tables;
tables

Show table st. : desc table-name;

insert values : INSERT INTO table-name(col1, col2, ...)
VALUES (), (), () ... ;

Display whole table : SELECT * FROM table-name

Display some cols : SELECT col1, col2 ... FROM
table-name;

update: UPDATE table-name
SET col1 = val1, col2 = val2
WHERE condition;

delete:
data DELETE from table-name
WHERE condition

delete table: DROP TABLE IF EXISTS table-name
delete data

from table: TRUNCATE table table-name;
