

MySQL

modul 7

Date functions

⇒ Functions

1. `CURDATE()`, `CURRENT-DATE()`
 - Returns current date
 - `SELECT CURRENT-DATE()`
2. `CURTIME()`, `CURRENT-TIME()`
 - Returns current time
 - `SELECT CURRENT-TIME()`
3. `CURRENT-TIMESTAMP()`, `NOW()`
 - Returns current date & time
 - `SELECT CURRENT-TIMESTAMP()`
4. `DATE-ADD()`
 - Adds specific interval to a date or timestamp
 - `SELECT DATE-ADD(CURRENT-DATE(),
INTERVAL 4 Day);`
5. `DATE()`
 - Extracts date part. (YYYY-MM-DD)
 - `SELECT DATE('2015-09-05 05:50:55.2100')`
↳ output: "2015-09-05"
6. `EXTRACT()`
 - Extract specific from date or timestamp
 - `EXTRACT(field FROM source);`
year,
month,
day, hour, minute, sec, week,

- SELECT dayofyear (current - timestamp());
" day of week "

7. DATEDIFF()

- calculates difference in days b/w dates
- DATEDIFF(date1, date2)

8. TIMESTAMPDIFF()

- calculates diff provided fields b/w dates
- SELECT TIMESTAMPDIFF(unit1, date1, date2)

units: min, hour, sec, Day, month, year

Timestamps

9. DATE-FORMAT()

- Formats date or timestamp as a string according to specified format
- SELECT DATE-FORMAT (date, '%Y-%m-%d')

%Y Year (4 digit)
%y Year (2 digit)
%M Full month name
%m Month (2 digits)
%b Short month name
%d Day of the month
%W weekday name
%a Short weekday name
