

MySQL

module 4 Aggregate functions

→ Aggregate fn

GROUP BY

we can use
multiple columns

- Group rows with similar values in one or more columns

clauses

COALESCE

COALESCE (exp1,
exp2,
exp3...);

- for handling null values.

- Returns first non null expression.

- If all expressions are null then it returns null

HAVING

- Substitute clause because WHERE can't be used with aggregate functions
