

MySQL

Module 3 SQL Basics

⇒ Data Query Language

① Sorting operations: Sort the output by Ascending / Descending

→ SELECT * FROM table
ORDER BY column-name ASC / DESC

② Distinct & limit clause:

→ SELECT DISTINCT column
FROM table;

→ SELECT * FROM table
ORDER BY column-name ASC / DESC
LIMIT n;
n → any number.

③ Aliasing

→ SELECT column-name AS alias-name
FROM table;

④ Filtering: Simple where clause
→ SELECT column FROM TABLE
WHERE ...;

NOTE: check if value is null: IS NULL
check if value is not null: IS NOT NULL
check if value is b/w: BETWEEN
2 no.

⑤ Logical operators :

AND → checks if all conditions are true.

OR → checks if either conditions are true

NOT → check if negation of condition is

product
→ (<>)

⑥ String operations :

LIKE operation.

→ % → multiple characters

→ _ → single characters

Eg: SELECT * FROM Customers
WHERE email LIKE
'%.gmail.com';

} email ending
with 'gmail.com'

SELECT * FROM products
WHERE product-name LIKE
'L%';

} product name
starting with
L.

SELECT * FROM Customers
WHERE first-name LIKE
'___';

} first name of
3 letters
only.

→ Some important functions

1. Display in uppercase : UPPER()

2. combine Text : CONCAT(Text1, " ", Text2)
whitespace

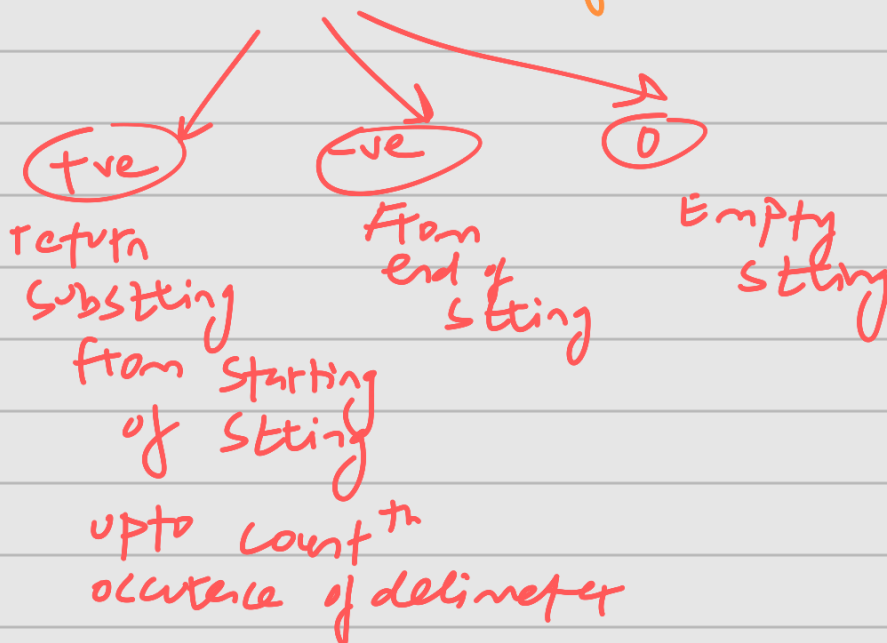

3. Total characters : LENGTH()
in text:

4. Length of Text without spaces : `REPLACE(column, " ", "")`;
To be replaced replacement

5. Locate first occurrence of substring in string beginning from position : `LOCATE(substring, string, position)`
OR
`LOCATE(substring, string)`
(from beginning of string)

6. Extract from : `SUBSTRING_INDEX(string, delimiter, count)`

string: original string
delimiter: , " ' _ ...
count: no. of delimiter occurrences
